

Metal 98: Proceedings of the International Conference on Metals Conservation, Draguignan, France, May 1998

Following the success of previous triennial meetings, the ICOM-CC Metals Working Group again organized a conference to discuss progress on the conservation of metals. Held in Figani?res-Draguignan, France in May 1998, over 70 papers were presented at the meeting. They reported on a wide range of techniques and materials, objects and locations. The Proceedings contain an edited selection of 60 of the best papers from the meeting. They represent a significant update to the understanding of this important field of conservation science and cover a full range of topics including:*

- metals and cultural heritage*
- characterization and properties of metals*
- soil and corrosion* corrosion products and deterioration processes*
- conservation and restoration interventions*
- protection of metals in both indoor and outdoor environments

The volume will be essential reading for all those whose work involves the conservation of metal objects or structures. It will be a valuable addition to any collections covering wider aspects of conservation in museums, architecture or archaeology and also of interest to all those involved with metallurgy and the degradation of materials.
